

Document Solutions for Universities

Prestigious University benefits from MTS Software Solutions by centralizing all records

Summary

A very prestigious University in Pennsylvania has utilized MTS Software Solutions by centralizing every facet of their business. MTS created a workflow system that scans all documents and microfilm and has agreed to service all the University's scanner hardware. By teaming with MTS, this now technologically advanced University has saved time, paper, and money.

Challenges

- Centralizing documents
- Converting paper and microfilm to digital images
- Creating more space for the growing number of students

Why Oracle with MTS Software Solutions?

- The software was able to index all scanned documents and allowed all documents to be stored in Archives and Records Center
- Oracle also allows employees to access these records instantly
- All documents are securely backed up and digitally stored in multiple locations

Solutions provided by MTS Software Solutions

- MTS was able to provide an imaging system, an in-house scanning system, and an MTS scanning system
- By integrating these systems, this University got rid of the need for storage facilities around the school and was able to create a centralized center where all records are kept

ROI

- Eliminated multiple storage facilities which saves money
- Increased available space for students and classes
- Decreased physical paper and microfilm

“As the number of students increases, so does the amount of archives and records. We had documents housed all over the city. By implementing a system that digitized all of our documents, gave us the ability to scan incoming documents, and kept MTS on our team to service all of our equipment, we were able to get all of our storage space back and utilize them for students and we were able to centralize all of our records into our Archive and Records Center. MTS was integral in the success of this project”
