

LSconnect Add-On Connectivity

LAN/Thin Client
Connectivity

Shareability

Web Based

Secure

CTS' new add-on connectivity solution **LSconnect** brings the Network to the device through its external Ethernet connection, taking connectivity a step further than other devices on the market. A smart, total networking solution, **LSconnect** adds network capability to any scanner in the LS series through a hardware external device and a suite of software for configuration, download and diagnostics. Unlike any other device on the market today, **LSconnect** enables a smooth and cost effective migration to LAN and Thin Client environments where a TC/IP connection is required.

Standard features:

- Compact — small, external add-on device
- Web ready — IP Ethernet connectivity for thin client (CITRIX) and web-based applications
- Compatible — with existing applications using common LS scanner series API
- Intelligent — embedded software tools allowing Network management and IP configuration
- Fast — capable of running network speeds 10Mbps-100Mbps and 1 Gbs
- Configurable — DHCP enabled
- Secure — supports SSL to encrypt data securing the image and code-line transfer
- Manageable — by branch server or single operator
- Powerful — on-board image processing compression, reducing network traffic
- Shareability — device can be shared among multiple, different users in the network
- Smart — remote scanner's health access via browser
